Jen Kelleman

PRINCIPAL CONTENT ENGINEER | SEMANTICS & SEMANTIC MODELING | RESPONSIBLE AI

Boston, MA | Email | LinkedIn | Portfolio | GitHub

Principal Content Engineer shaping enterprise data and AI experiences through semantics, semantic modeling, and terminology governance. Turns ambiguous product and data concepts into clear semantic systems, prototypes, evaluation frameworks, and reusable practices in partnership with design, product, and engineering. Work spans Microsoft Fabric, responsible AI, agent workflows, and independent Python-based AI projects.

EXPERIENCE

Microsoft | Fabric Data Engineering | Cambridge, MA

Principal Content Engineer, AI & Data Products | Current

- Lead terminology strategy and governance for Fabric Data Engineering, shaping the semantics and semantic models that help users and AI systems interpret complex data capabilities.
- Partner across design, product, and engineering on experiences spanning Lakehouse, Materialized Views, Monitoring, and agentic AI.
- Designed information architecture and a status taxonomy for nine notebook dependency scenarios to make operational status easier to scan.
- Built a research-backed framework to evaluate 60+ product-name candidates; aligned stakeholders through senior technical and executive review.
- Created reusable glossaries, semantic modeling guidance, evaluation rubrics, and onboarding patterns across four product areas, including criteria for terminology accuracy, grounding, and task completion.
- Developed AI-first design review and content governance practices that make AI influence, quality, and human judgment explicit.

SELECTED SEMANTIC, AI & RESPONSIBLE AI WORK

Semantic Modeling & AI Agents | Independent, Python, MCP

Built MCP agents around semantic models for governed metrics and explainable data insights. The metrics project includes persistent storage, trust scoring, data lineage, and 35+ tests. Also designed an agent workflow system with eight specialized agents and custom skills. GitHub projects.

Responsible AI & Quality Frameworks | Open-source handbook and enterprise work

Created reusable guidance for AI evaluation, bias detection, safety, and transparency. Developed quality rubrics and trust signals for AI-assisted experiences, emphasizing explainability, grounding, and human accountability. AI Content Design Handbook.

Promptcraft & Accessible Experiences | Microsoft Design Week and hackathons

Created a prompt engineering workshop selected for Microsoft Design Week and trained 100+ designers. Contributed to Deaf-led sign-language experience work recognized with three executive hackathon awards and an Ability Executive Challenge win.

VibeHub | UX engineering platform, co-lead

Co-led a platform to democratize UX engineering, supporting more than 10,000 projects in production.

EDUCATION

Carnegie Mellon University | MS, Data Science (in progress) **Tufts University** | MS, Computer Science (in progress)

Emerson College | MA, Writing and Publishing; Digital Innovation **Lafayette College** | BA, Psychology and English

Additional study: Microsoft Azure Data University, Cloud Computing; Deque University, Designing an Accessible User Experience

SELECTED SKILLS & CREDENTIALS

Semantics & product: Semantics, semantic modeling, semantic grounding, terminology governance, UX and product strategy, research synthesis, information architecture, design systems, accessibility, cross-functional leadership.

AI: Responsible AI, AI evaluation, agent workflows, prompt engineering, AI prototyping, safety, transparency.

Technical: Python, SQL, Git/GitHub, MCP, SQLite, pytest, REST APIs, Figma API automation.

Certifications: Microsoft Azure AI Fundamentals (AI-900), GitHub Foundations.
