PROFILE

Principal-level design architect who takes ambiguous enterprise AI, agentic, and machine learning opportunities from 0 → 1 and turns them into implementation-ready interaction and system architecture. Experience spans agent orchestration, tool use, prompt and context engineering, model evaluation, observability, reliability patterns, data and semantic layers, and integration with version-controlled design and engineering workflows. Connects research, content strategy, UX writing, working prototypes, implementation specifications, telemetry, and validation so intelligent system behavior is understandable, recoverable, and governable.

EXPERIENCE

Microsoft | Data & Agentic AI Systems — 2022-present

Principal Content Designer

- Lead 0 → 1 design for cross-product enterprise data and AI workflows. Turn product and technical ambiguity into interaction models, user flows, content contracts, prototypes, and implementation-ready specifications.
- Create reusable error and recovery architecture and content strategy for Fabric—error anatomy, status language, action labels, guidance, and escalation—making failures predictable and recoverable across products.
- Design autonomous engineering agent, Copilot, and Work IQ workflows. Define orchestration, tool use, context, status, delegation, review, recovery, and integration with version-controlled engineering workflows.
- Turn stalled cross-functional decisions into evidence-backed product direction, then carry decisions into implementation guidance and validation criteria.
- Create research-to-implementation traceability across hypotheses, decision records, implementation-ready specifications, telemetry, and testable system behavior.
- Align design, product, engineering, research, accessibility, and localization around reusable patterns while preserving product-specific needs.
- Prototype monitoring, permissions, governance, and administrative experiences for complex enterprise systems and regulated environments.

Independent Design Architecture & Prototyping — Ongoing

Creator | Systems Designer | Technical Prototyper

- Build human-governed AI operating systems with 8 specialized agents across 320+ versioned files, explicit decision rights, durable context, review checkpoints, and reusable workflows.
- Created Experience Mapper to connect qualitative evidence, journey insights, opportunities, and design decisions in one traceable prototype.
- Published the AI Content Design Handbook and built AI Content Orchestrator, turning research into evaluation methods, transparency templates, long-form articles, and platform-specific content workflows.
- Led design and UX engineering for VibeHub, a live platform with more than 20,000 production projects verified as of March 2026; one public AI prototype is backed by 35+ tests and 90%+ coverage.

Earlier Product, Content & Consulting Leadership — 15+ years

Experience Strategy | Customer Journeys | Regulated Industries

- Led journey mapping, information architecture, user flows, experimentation, personalization, and voice interfaces across enterprise customer experiences.
- Advised business and technical teams, turning customer evidence into product decisions, reusable standards, design patterns, implementation guidance, and shared decision criteria.
- Led UX content strategy across CVS Retail, OTC Health Solutions, and Aetna, aligning healthcare, pharmacy, and insurance experiences around shared customer standards.
- Designed personalized and voice experiences for AT&T, American Express, Bank of America, and Verizon, translating brand and business rules into scalable content systems.

PRINCIPAL IMPACT

0 → 1	ambiguity to validated product direction
3x	Executive Awards for Microsoft Global Hackathon projects
90%+	test coverage on a public AI prototype
320+	versioned files in a human-governed AI operating system

SELECTED PROTOTYPES

Semantic Metrics Modeling Assistant
Trust scoring, lineage visualization, and governed conversational metric definition.

AI-Assisted Insights Agent
Explainable natural-language-to-SQL with reproducible queries and quality checks.

AI Content Design Handbook
Testing methods, bias guidance, transparency templates, and reusable content patterns.

Wedding Planning Agent
Semantic modeling, dependency mapping, and inspectable recommendation scoring.

Fabric Unified Error Framework
Cross-product prototypes for consistent error anatomy, recovery actions, permissions context, telemetry, and accessibility.

CORE CAPABILITIES

Design Architecture
0 → 1 product definition | Cross-product interaction models | Content strategy | UX writing | Content systems | Information architecture | Design systems | Trust, error and recovery

Research & Validation
Mixed-method research | Experimentation | Prototyping | Usability evaluation | Decision traceability | Success measures

AI & Enterprise Systems
Machine learning systems | Agent orchestration | Tool use | Prompt and context engineering | Model evaluation | Model observability | Reliability patterns | Data pipelines | Data and semantic layers | Workflow integration | Human-in-the-loop design | Governance

Industries & Verticals
Enterprise software and cloud | Data and AI platforms | Developer tools | Healthcare, pharmacy and insurance | Financial services | Telecommunications | Personalization and voice

TECHNICAL FLUENCY

VS Code | Figma | Microsoft Foundry | Microsoft Fabric | GitHub Copilot | Work IQ | MCP | Python | SQL | TypeScript/JavaScript | React/Vite | HTML/CSS | R | PowerShell | Git & GitHub | REST APIs | Machine learning | Model evaluation | Data pipelines | Automated tests | CI | Browser validation | Data visualization | Semantic modeling | Telemetry planning

EDUCATION & CERTIFICATIONS

Carnegie Mellon University | Data Science
Emerson College | Writing and Publishing; Digital Innovation
Lafayette College | Psychology and English
Certifications | GitHub Foundations; Microsoft Azure AI Fundamentals

HACKATHONS & RECOGNITION

Microsoft Global Hackathon | Organizer, mentor, and judge since 2022; projects received three executive awards
2024 Ability Hack | Team recognition for deaf-led sign language experience work
FlareIQ | Winning-pitch credential
