Jen Kelleman

AI-FIRST PRODUCT & UX LEADERSHIP | RESPONSIBLE AI | AGENT SYSTEMS

Boston, MA | Email | LinkedIn | Portfolio | GitHub

Product and UX leader with experience shaping enterprise technology and AI experiences from 2012–2022. Turns ambiguous problems into clear product systems, prototypes, evaluation frameworks, and reusable practices in partnership with design, product, and engineering. Work spans Microsoft Fabric, responsible AI, agent workflows, and independent Python-based AI projects.

EXPERIENCE

Microsoft | Fabric Data Engineering

Content Designer, AI & Data Products | Current

- Lead terminology strategy and governance for Fabric Data Engineering, shaping how users understand and work with complex data and AI capabilities.
- Partner across design, product, and engineering on experiences spanning Lakehouse, Materialized Views, Monitoring, and agentic AI.
- Designed information architecture and a status taxonomy for nine notebook dependency scenarios to make operational status easier to scan.
- Built a research-backed framework to evaluate 60+ product-name candidates; aligned stakeholders through senior technical and executive review.
- Created reusable glossaries, evaluation rubrics, and onboarding patterns across four product areas, including criteria for terminology accuracy, grounding, and task completion.
- Developed AI-first design review and content governance practices that make AI influence, quality, and human judgment explicit.

SELECTED AI, UX & RESPONSIBLE AI WORK

AI Agents & Prototyping | Independent, Python, GitHub
Designed a version-controlled agent workflow system with eight specialized agents and custom skills. Built MCP agents for governed metrics and explainable data insights; the metrics project includes persistent storage, trust scoring, lineage, and 35+ tests. GitHub projects.

Responsible AI & Quality Frameworks | Open-source handbook and enterprise work
Created reusable guidance for AI evaluation, bias detection, safety, and transparency. Developed quality rubrics and trust signals for AI-assisted experiences, emphasizing explainability, grounding, and human accountability. AI Content Design Handbook.

Promptcraft & Accessible Experiences | Microsoft Design Week and hackathons
Created a prompt engineering workshop selected for Microsoft Design Week and trained 100+ designers. Contributed to Deaf-led sign-language experience work recognized with three executive hackathon awards and an Ability Executive Challenge win.

VibeHub | UX engineering platform, co-lead
Co-led a platform to democratize UX engineering, supporting more than 10,000 projects in production.

EDUCATION

Carnegie Mellon University | MS, Data Science (in progress) **Tufts University** | MS, Computer Science (in progress)

Emerson College | MA, Writing and Publishing; Digital Innovation **Lafayette College** | BA, Psychology and English

Additional study: Microsoft Azure Data University, Cloud Computing; Deque University, Designing an Accessible User Experience

SELECTED SKILLS & CREDENTIALS

AI & product: Responsible AI, AI evaluation, agent workflows, prompt engineering, semantic grounding, AI prototyping, UX and product strategy, research synthesis, design systems, accessibility, cross-functional leadership.

Technical: Python, SQL, Git/GitHub, MCP, SQLite, pytest, REST APIs, Figma API automation.

Certifications: Microsoft Azure AI Fundamentals (AI-900), GitHub Foundations.
